HUGHES

300C

The latest from the GMP drawings boards - a completely new .25 to .40 powered scale helicopter.

This unique model uses the well known and reliable "CRICKET" transmission and controls in an entirely new arrangement to ensure the nearest possible scale configuration for the new GMP "HUGHES 300C".

The "HUGHES 300C" is a little larger than "CRICKET". A complete detailed plastic moulded interior of seats and console is provided and the cabin/canopy is a two piece vacuum moulding drawn from a new, very clear plastic.

The engine is cone started, as it is with "CRICKET", and an entirely new cooling fan and shroud arrangement is standard.

The GMP "HUGHES 300C" is available as a complete kit BUT, TO PROVIDE OUR "CRICKET" customers with the minimum expense of buying and using GMP products, we have made a "conversion" kit available for "CRICKET" owners.

Please note the GMP "HUGHES 300C" is NOT a metal frame helicopter fitted with a semi-scale shell. It is configured "from the ground up" to be as scale as possible, both in appearance and in flight.
